## Django notes

```
# using uv as a python package and project manager, which is written in rust  
installing uv " pip install uv
```

```
# after installing uv install the venv by using "uv venv" command to create the environ.
```

```
# activating the venv " .venv\Scripts\activate"
```

```
# installing Django via uv "uv pip install Django"
```

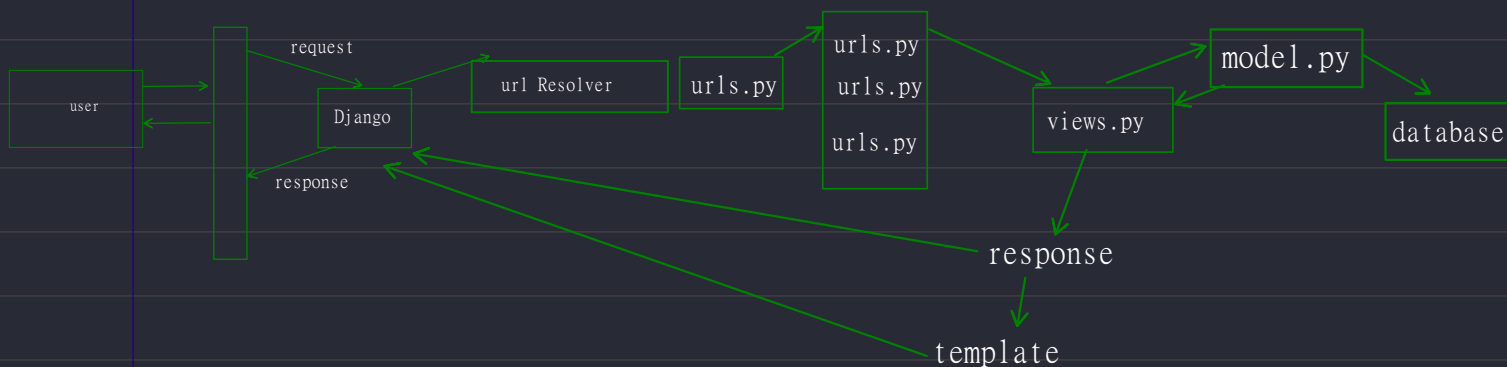

### Creating project in django:

1. Django has only one project and under it has many sub apps
2. Creating the project "django-admin startproject chaiaurDjango"

### Running the project:

```
# "python manage.py runserver"
```

### complete flow of Django app

### # creating apps

```
python manage.py startapp chai
```

### # html suggestion settings

```
# go to setting,  
# find emmet add "django-html" and html to languages.
```

### Django tailwind setup:

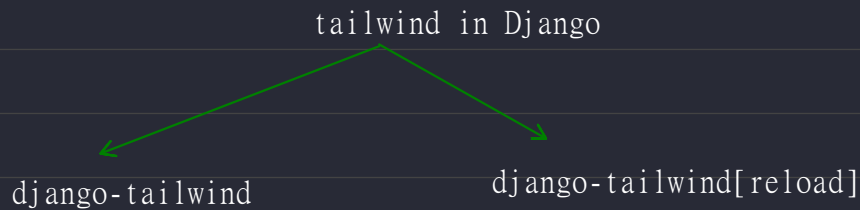

```
# "uv pip install django-tailwind"
```

```
# for reloading the page after every tailwind style install  
"uv pip install 'django-tailwind[reload]'"
```

```
# it will audit 1 file
```

```
# to resolve it install pip
```

```
# "python -m pip install"
or "python -m ensurepip --upgrade"
```

```
# run the code
```

```
# "python manage.py tailwind init"
```

```
# add this 2 line to settings.py
```

```
TAILWIND_APP_NAME = 'theme'
INTERNAL_IPS = ['127.0.0.1']
```

```
NPM_BIN_PATH = r"C:\Program Files\nodejs\npm.cmd"
```

find it using where npm

```
# add theme name to "INSTALLED_APPS"
```

```
python manage.py runserver 18 migrate error
```

```
# python manage.py migrate
```

```
# now we can access the admin
```

```
# creating super user
```

```
python manage.py createsuperuser
```

```
Database interaction
```

```
# we need Pillow module
```

```
"python -m pip install Pillow"
```

```
importing db code to python
```

```
# "python manage.py makemigrations chai"
```

```
After every model creation run these command
```

```
# "python manage.py makemigrations chai"
```

```
# python manage.py migrate
```
